

Creator Commerce

5 Minute Builder Quick Guide

1 Creator Commerce in 30 Seconds

```
User -> Seller / Creator / Professional capabilities
Seller -> Storefront -> Product -> Media -> Admin Approval -> Live Product
Creator -> Finds Product -> Promotes Product -> Promotion Tracking
Buyer -> Product -> Cart -> Checkout -> Order
Seller -> Fulfilment
Buyer -> Return if needed
Creator -> Commission
```

Capabilities are independent, so one account can hold Seller, Creator, and Professional roles. Sellers own storefronts and products; Admin approval controls availability. Creators reference approved Products instead of copying them. Checkout snapshots attribution and commission into Seller-specific orders. Payment, KYC, courier, refunds, and payouts still need real providers.

2 Commerce Home

Screen: /commerce

- **Seller** - Selling capability; Approved unlocks **Seller tools** at /commerce/seller; independent from Creator and Professional.
- **Creator** - Promotion capability; Approved unlocks **Creator tools** at /commerce/creator.
- **Professional** - Separate credential layer; it does not replace Creator approval.
- **Buyer KYC** - Server-owned identity state used by the COD gate.
- **Become a Seller / Become a Creator / Apply for Professional Verification** - Opens matching onboarding.
- **Buyer marketplace** - Opens /commerce/buyer for cart, checkout, orders, evidence, and returns.
- **Seller tools** - Opens the approval-controlled Product Studio.
- **Creator tools** - Opens promotion, checkout test surfaces, and commissions.
- **Admin review** - Opens /commerce/admin only with Commerce Admin access.
- **Refresh commerce status** - Reloads capability state from Supabase.

3 Seller Product Studio

Screen: /commerce/seller

- **Open advanced media studio** - Opens web-only Seller Central at /seller.
- **Title** - Product display name.
- **Slug** - URL-safe product identifier.
- **Wellness / Home / Travel / Everyday** - Current category choices.
- **Price** ☐ - Regular price entered in rupees.
- **Sale price** ☐ - Optional effective price; cannot exceed regular price.
- **Inventory** - Total stock; the card shows available stock after reservations.
- **SKU** - Seller-side inventory identifier.
- **Description** - Shared product copy used in review and commerce surfaces.
- **Creator promotion enabled** - Controls whether approved Creators can promote the Product.
- **Creator commission %** - Attributed share; valid range is 5-70% when enabled.
- **Return window days** - Post-delivery return period; backend range is 0-30 days.
- **Save product draft** - Persists without entering Admin review.
- **Edit** - Loads Draft, Changes required, or Rejected data into the form.

- **Submit for approval** - Moves an editable Product into Product Approval Queue.
- **Media X/10** - Persisted media count shared with Advanced Seller Studio.
- **Submit / Replace packing evidence** - Stores private order packing evidence.
- **Fulfilment state buttons** - Expose only the next valid order transition.

4 Advanced Seller Studio

Screen: /seller - exact live sidebar labels below.

Overview

Purpose: Store health, products, inventory, SEO, visitors, orders, revenue, conversion, and payment mix. **Used for:** A readiness scan. **Connected to:** Storefront, Catalog, Shop, and analytics. **Important controls:** Health card and **Add product**. Notification and account icons are not wired here.

Storefront

Purpose: Public identity: names, slug, tagline, description, tier, category, location, support, address, and GSTIN. **Used for:** /store/{slug} and delivery context. **Connected to:** Product ownership, checkout, analytics. **Important controls:** **Save storefront**; **Create seller account** appears only before setup.

Catalog

Purpose: Product collection with SKU, paise price, stock, copy, tags, keywords, and media. **Used for:** Product presentation and images. **Connected to:** Admin, Creator marketplace, Shop, Storefront. **Important controls:** **Add 1 to 10 product images**, **Publish product**, **Update product**, **Catalog inventory**. □999 is 99900 paise.

Orders

Purpose: Order queue with customer, total, fulfilment, carrier, tracking, package, and delivery note. **Used for:** Operations. **Connected to:** Seller orders and customer timeline. **Important controls:** **Refresh orders**, **Manage**, **Save fulfilment**. Use /commerce/seller for strict transitions and packing evidence.

Business chat

Purpose: Storefront customer inbox. **Used for:** Product and order support. **Connected to:** Storefront conversations. **Important controls:** Select and reply. Search/filter, phone, and video controls are presentation-only.

SEO & AI

Purpose: SEO title, description, LLM summary, crawlability, GEO, URLs, and preview. **Used for:** Machine-readable pages. **Connected to:** Public metadata and JSON-LD. **Important controls:** **Publish crawlable pages**, **Enable GEO summaries**, **Save discoverability settings**.

Operations

Purpose: Support profile and commerce-readiness summary. **Used for:** Checking Storefront, Product, stock, contact, and SEO. **Connected to:** Seller data; no payout or courier provider is connected. **Important controls:** Read-only operational summary.

Catalog vs Product vs Storefront vs Media

Term	What it is	Example
Storefront	Seller-owned public business page and ownership boundary	Social24 Test Store
Catalog	Management view of every Product in that Storefront	Its two inventory rows
Product	One sellable approved item	Manual Test Product
Media	Ordered images attached to one Product	Product cover PNG

Media Studio

- **Media 1/10** means one persisted asset is attached out of ten allowed.
- The picker accepts 1-10 images; no saved-item reorder or individual remove control is visible.
- Seller upload -> Seller-owned Storage object -> product_media association -> Admin preview -> approved public Product image.
- The first attached item becomes the cover path; Product Studio, Admin, and public pages use the same Product source.
- Product media is public only for live approved Products; verification and order evidence use private Storage.

5 Admin Product Review

Screen: /commerce/admin

- **Product approval queue** is the authoritative review surface for Seller-submitted Products.
- Seller capability approval authorizes selling; Product approval separately authorizes one listing and its media.
- **changes required** returns the Product to a Seller-editable state with review notes.
- **Approve live** moves Product approval to Approved and Product status to Active.
- Active Approved promotion-enabled Products appear to Creators and Buyers.
- **suspended** removes live and promotion availability without deleting history.
- Media is shown because Admin reviews the same visual source used publicly.
- The page also contains application review plus **Checkout KYC and returns test controls** for non-production lifecycle verification.

6 Creator Workspace

Screen: /commerce/creator

- **Creator product marketplace** - Approved promotable Products; **Promote / Refresh promotion** creates or reuses the relationship.
- **Cart and checkout** - Combined Creator/buyer test surface with address, ₹5 fee, **Checkout external**, and **Checkout COD**.
- **Buyer orders and returns** - Purchased items and return action; one account may also be a Buyer.
- **Checkouts** - Internal checkout/payment state history.
- **Creator commissions** - Product, commission status, amount, and eligible item value for attributed order items.

Creators see Products only when Active, Approved, and promotion-enabled. **Promote** creates one tracking relationship, not a Product copy; Seller still controls price, stock, media, and availability. /shop is the existing consumer catalog, while /commerce/buyer is the implemented Creator Commerce Buyer flow.

7 Promotion and Attribution

Promotion is a Creator-Product relationship with a tracking code. **Last Click** means Buyer opens Creator A, then Creator B for the same Product; B becomes current attribution while both clicks remain in history. Cart stores the chosen promotion; Order Item snapshots preserve credit after later changes.

8 Cart Checkout and Order Splitting

A multi-Seller cart creates one checkout_group, then one order per Storefront with correct order_items. RLS lets each Seller see only its order.

Checkout revalidates price, stock, Seller, Active + Approved state, promotion, and delivery. Fee is ₹5 once per checkout. **COD requires Verified Buyer KYC**. GST Sellers are pan-India eligible; Non-GST Sellers are same-state only.

9 Fulfilment Returns Commission

```
Placed -> Confirmed -> Processing -> Shipped -> Out for Delivery -> Delivered
Delivered -> Return window -> Return request when applicable
Commission: Pending -> Confirmed -> Eligible -> Payable -> Paid
Return branch: Confirmed -> Withheld -> Reversed or restored to Confirmed
```

Delivered starts the return window and confirms commission. Return submission withholds it; approval reverses it. Eligible, Payable, and Paid exist, but payout is not connected.

Example: ₹1000 at 20% creates ₹200. A later change to 10% does not rewrite that snapshot.

10 What Important Buttons Actually Change

Button	What it changes	Next result
Save product draft	Product fields in Draft	Editable Product card
Submit for approval	Approval state to Submitted	Admin queue actions unlock
Approve live	Approval Approved plus status Active	Creator/Buyer visibility
Open advanced media studio	Route only	/seller Catalog/media tools
Update product	Catalog metadata and selected media	Shared Product source refreshes
Promote	Creator-Product relationship	Buyer tracking link
Refresh promotion	Reuses/reactivates same relationship	No duplicate promotion
Add to cart	Buyer Product quantity plus attribution	Checkout-ready cart line
Checkout external	Checkout/payment pending records and Seller drafts	Admin test confirmation or future provider
Checkout COD	KYC-gated placed checkout	Seller order becomes fulfilment-ready
Fulfilment next state	Order, fulfilment, and event rows	Next valid state button
Submit return request	Return row and commission Withheld	Admin return decision

11 Current External Boundaries

Function	What we built	Still needs provider
Razorpay	Checkout, payment attempt, test capture, order gate	Live order, signature/webhook, capture, refund
Automated KYC	Server-owned state and COD gate	Identity collection and verified result
3PL courier	Seller state machine and tracking fields	Shipment, label, scans, webhooks
Bank payout	Commission ledger states	Creator onboarding, settlement, reconciliation
Google Business verification	No current integration	Only if product later requires it

12 Important Technical Things to Remember

- Seller, Creator, Professional, KYC, and Admin are independent capabilities.
- Products remain Seller-owned when promoted; promotion stores a reference.
- Last valid click selects Creator attribution; click history remains.
- Commission percentage and amount are snapshotted at checkout.
- One multi-Seller checkout becomes Storefront-specific orders.
- Checkout revalidates money, stock, approval, Seller, attribution, and delivery.
- RLS and RPC checks, not hidden buttons, protect cross-user data and transitions.
- Private verification/order evidence is separate from public approved Product media.
- Storage media ownership uses `owner_id`.
- Product Storage policy explicitly qualifies `storage.objects.name`.

13 Recent Important Bug

Media upload failed from an old ownership field and ambiguous name. The fix uses `owner_id` and `storage.objects.name`. Seller upload, Admin preview, and approved public media work; cross-user upload stays blocked.

14 Two Minute Demo Script

- 1 **Commerce Hub** - "These independent capabilities control Seller, Creator, Professional, KYC, and Admin access."
- 2 **Seller Tools** - "This Studio owns commercial fields, commission, return window, and the Product approval lifecycle."
- 3 **Create Product** - "Save keeps a Draft; Submit sends the same Product to Admin."
- 4 **Media** - "Advanced Catalog attaches Seller-owned media to that shared Product."
- 5 **Admin Approval** - "Approve live makes Active Approved content available to Creators and Buyers."

- 6 **Creator Marketplace** - "Creator sees Seller-controlled price, stock, media, and commission offer."
- 7 **Promote** - "Promotion creates a stable Creator-Product tracking relationship, not a copy."
- 8 **Cart** - "Last valid Creator click is stored with the Buyer line."
- 9 **Checkout** - "Backend revalidates the deal, adds □5 once, and splits orders by Storefront."
- 10 **Fulfilment** - "Seller advances only through the enforced delivery chain."
- 11 **Return** - "A return withholds commission; approval reverses it and creates a pending refund record."
- 12 **Commission** - "The checkout snapshot preserves historical Creator economics while payout remains external."

Small FAQ

What is the difference between Storefront Catalog Product and Media

Storefront is the public business and ownership boundary. Catalog manages its Products. Product is one sellable record; Media is its image set.

Why does Creator promotion reference instead of copy the Seller Product

A reference keeps one source for price, stock, media, approval, and availability.

How exactly does Last Click attribution work

The newest valid click is attached to cart. Earlier clicks remain; checkout snapshots the selected click and Creator.

Why snapshot Creator commission

Later Seller changes must not rewrite the purchase-time commission.

Why split one checkout into Seller-specific orders

Each Seller needs an isolated fulfilment, return, and RLS boundary.

Why revalidate Product data at checkout

Cart facts can become stale; checkout is the authoritative transaction boundary.

How can one account be Seller Creator and Professional

Separate capability fields unlock each role independently.

Which parts still need external providers

Real payment/refund, automated KYC, courier events, and Creator bank settlement.

How is Product media security different from verification documents

Approved Product media is publicly readable and Seller-owned for writes. Verification and order evidence stay private and use authorized signed URLs.

What happens when Product or Seller is suspended

Protected Seller operations close when Seller capability is not Approved. Suspended Product is no longer Active + Approved, so live queries, promotion clicks, and checkout reject it while history remains.
